

MailStream Plus® Presort Solution

Presort to the Highest Level Possible

- Organize and presort mailings of all classes and types of mail for maximum postal discounts
- Support the latest industry and USPS® electronic initiatives
- Make necessary, on-the-fly file adjustments to support production operations
- Take control your presort process from a centralized system

Our MailStream Plus® solution prepares mail and mailing summary reports according to USPS® regulations, thereby reducing the time and money it costs to do a mailing.

It starts with the input file, which may contain addresses, ZIP Code™ and other information. Users simply define the content and format of the input file to the MailStream Plus® solution, define processing requirements, select which optional reports to print and define the content and layout of the output records. At the user's request, the MailStream Plus® solution appends mail handling (endorsement) data, container and package numbers, or even the presort level, to your output records.

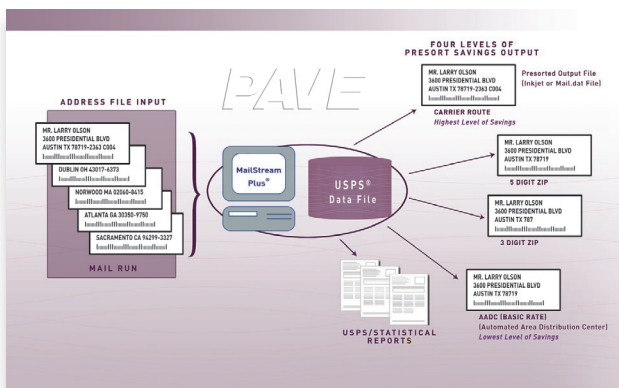

The MailStream Plus® solution produces the forms that the USPS® needs to verify and accept mail, using parameter record definitions to fill in the blanks. It also generates the reports that provide the breakdown of a mailing, helping the mail shop group, bundle and package the mail pieces.

Our MailStream Plus® solution uses our proprietary USPS® reference files to calculate:

- Presorts
- Delivery counts
- ZIP Code™ directory
- USPS® zone list
- Routing maps
- Destination data
- Sequencing data

Key Attributes

- Maximum possible postage discounts can be applied to domestic First Class® mail, periodicals, standard, and package service mailings, and letters, flats and parcels
- Drop-shipping, palletization and manifest reports enable additional discounts and labor savings
- A Palletization Module permits mail palletization at all allowable USPS® levels
- A Manifest Reporting Plus module successfully tracks and reports on multiple piece-weight mailings, while providing proper USPS® Manifest Mailing System documentation
- Our user interface assures control over all direct marketing processes, from job set-up through result analysis
- Flexible technology permits parameter changes for each mailing
- Solution fully integrates with our MAIL360™ communications intelligence solution
- Supports a wide variety of platforms and operating systems, including Windows®, Unix (Including Linux), iSeries (OS/400), IBM® Mainframe (MVS/VSE/OS/390) and DEC

Presort for maximum postal discounts with the MailStream Plus® solution.

Case Scenario

The MailStream Plus® solution is a component of our suite of address quality applications that can dramatically reduce business mailing costs.

The solutions enable mailing departments for communications companies and electric utilities to maximize postal discounts by standardizing addresses, validating postal codes and presorting mailings for significant savings.

By using these applications, direct marketers will value the integrity of name and address information, eliminate duplicate addresses and provide more accurate, on-time delivery of goods and services.
